

STRICTLY NO AGENCIES

Calling all Lighting Designers!

We are recruiting... and if you have a passion for all things lighting design, then this could be the job for you!

Firstly, a little bit about us.

Founded in 1995, we are at the forefront of the latest developments in LED Lighting Design and Lighting Controls. With in-house design and development, including our own photometric testing lab, we undertake extensive research and are dedicated to LED innovation and product design. It is the people at LDL who continue to push boundaries and epitomise innovation, making us the company we are.

We are a progressive company with significant growth over the past 3 years, and we continue our focus on long term growth and going from strength to strength. As a result of this, we are looking to expand our Lighting Design Team.

The Role:

The right candidate will have experience of creating Lighting Design Schemes, very strong technical skills, a can-do attitude and willingness to learn. We have an extensive range of luminaires for both interior and exterior use and you will be responsible for considering the well-being, economic and sustainability requirements for a host of projects for a range of sectors from Office, Commercial, Healthcare, Sport and Leisure to name but a few. We expect the Lighting Schemes we produce to be both efficient and appealing, introducing lighting control to create sustainable solutions.

You will be able to produce Lighting Schemes that consider the complete solution- either as a simple floor plan or as a fully rendering 3D presentation. Within the role, you will closely liaise with the sales and project team in order to design and produce lighting schemes for our clients, through the use of Relux.

This is a full time, permanent position based at our newly expanded headquarters in Wigan. There are many benefits to joining our dynamic, growing team. We promote a friendly environment of trust that always encourages suggestions for improvements from team members. In addition to a competitive salary, you will also receive a company pension.

To thrive in this role, candidates would ideally possess the following attributes:

- Proven lighting design experience required
- Knowledge of luminaires although training for our product range will be provided
- Knowledge of lighting control technologies and best practices
- A passion for how lighting can affect and enhance spaces
- A practical aptitude and be willing to undergo further training, where necessary

To apply for this exciting opportunity ... Simply send us your CV and Covering Letter to info@ldl.lighting
